

A (debatably) Brief Introduction to Python

ASSIGNMENT 0: THE PYTHON FILE

Using your newfound knowledge of `print()`, `sys`, and the basics of running python files, create a python program that prints all of the command line arguments. The output should look something like this:

```
Vedants-MacBook-Pro:solutions Dant$ python ch0.py this is a sample run of the correct code  
['ch0.py', 'this', 'is', 'a', 'sample', 'run', 'of', 'the', 'correct', 'code']  
Vedants-MacBook-Pro:solutions Dant$ █
```
